### **Protein Sequence Searches – February 2005**

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (uniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

Anthrax toxin protective antigen (PA) binds to the ATR at a von Willebrand factor A domain located in the extracellular domain of ATR. The invention provides ATR polypeptides and polynucleotides, vectors, host cells, and transgenic and knock-out animals. It also provides methods for identifying molecules that bind the ATR and which reduce the coxicity of anthrax toxin. A claimed method for treating anthrax in a human or animal involves administering an agent that inhibits binding between PA and ATR at a level effective to reduce the severity of anthrax. Sultable agents include ATR or a PA-binding fragment of ATR, a PA-binding polypeptide at least 80% identical to these, a fusion protein, a monoclonal or polyclonal antibody, a polysaccharide, a lipid or a

CA AADD5300-AADD5379 represent cDNAs corresponding to 28 human secreted comprotein genes, and AAE0146-AAE01513 represent the proteins they encode. CC AAE01514-AAE01544 represent human secreted protein fragments or variants. CC The genes and their secreted proteins are useful for preventing, treating correct on the first protein or gene therapy. CC pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the 28 genes, common the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, autoimmune cd diseases (e.g., rheumatoid arthritis), inflammation, allergies, autoimmune cognitive disorders, diseases of the immune system, AIDS, autoimmune cognitive disorders, disbetes, atherosclerosis, cardiovascular disorders, candiopenia, asthma, skin disorders, (e.g., prepinancy-related disorders, atherosclerosis, cardiovascular disorders, candiopenic disorders, atherosclerosis, cardiovascular disorders, prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding protein of the invention can be used as a food additive or greservative to modify storage properties. The present invention relates to albumin fusion proteins comprising a therapputic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapputic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders
                                                                                                                                                                                                                                                                                                                                                                      Rosen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12-APR-2001, 2001WO-US011988

albumin fusion proteins,

useful for diagnosing, treating,

preventing

```
activities: cyrostatic, antianaemic, antiarthritic, antiasthmatic, anti-
CC HIV, immunosuppressive, antiinflammatory, antipsoriatic, antibacterial,
CC osteopathic, dermatological, antigout, immunomodulator, antiarrhythmic,
CC cardiant, nootropic, antilipaemic, nephrotropic, uropathic,
CC cardiant, nootropic, antiparkinsonian, tranquilizer, antidiabetic, anabolic,
CC hypertensive, and vulnerary. The albumin fusion protein nucleic acid may
CC he used in gene therapy to treat disorders. The albumin fusion protein is
CC useful for diagnosing, treating, preventing or ameliorating diseases or
CC disorders comprising indication: Y. The diseases or disorders include:
CC cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer)
CC immune or haematopoletic diseases (e.g. anaemia, Hodgkin's disease, acute
CI lymphocytic anaemia, multiple myeloma, arthritis, asthma, AIDS,
CC autoimmune disease, inflammatory bowel disease, scutes
CC disease), reproductive system disorders (e.g. prostatilis, inguinal
CC leydig tumours), musculoskeleletal diseases (e.g. giant cell tumours,
CC disease, exertenic lunus ervitematorus
CC disease, acute controlled disease (e.g. giant cell tumours)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Paget's disease, systemic lupus erythematosus, gout, muscular dystrophy or cachexia), cardiovascular disease (e.g. rhabdomyomas, heart disease, arrhythmia, cardiaca arrest, heat valve disease, hypernatraemia or hyponatraemia), mixed foetal diseases (e.g. foetal alcohol syndrome, bown's syndrome, Patau syndrome, Turner's syndrome, Apert syndrome, Down's syndrome, Patau syndrome, Turner's syndrome, Apert syndrome or Tay Sachs disease, excretory diseases (e.g. urinary incontinence, urinary tract infections or renal disorders), neural or sensory disease (e.g. Alzheimer's disease, Parkinson's disease, cerebral malaria, meningitis, cerebellar ataxia, attention deficit disorder, autism or obsessive compulsive disease, respiratory disease (e.g. emphysema, lung cancer or occupational lung disease), endocrine diseases (e.g. diabetes, Addison's disease or glomerulonephritis), disease (e.g. diabetes, Addison's hypertension, irritable bowel disease, gastric atrophy or pancreatitis) or connective tissue or epithelial disease (e.g. Cohn's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    fragment or variant; a nucleic acid molecule comprising a polynucleotide sequence encoding the albumin fusion protein; a vector comprising the nucleic acid molecule of the albumin fusion protein; and a host cell comprising the nucleic acid molecule of the albumin fusion protein. The albumin fusion protein and its compositions have the following
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     or ameliorating diseases or disorders e.g. cancer, anemia, arthritis, asthma, inflammatory bowel disease or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 albumin fusion protein formula; a method of treating a disease or disorder in a patient comprising the step of administering the albumin fusion protein; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; a method of extending the shelf life of Therapeutic protein: X, or its a method of extending the shelf life of Therapeutic protein: X, or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        scleroderma, wound healing or epidermolysis bullosa). This sequence represents a therapeutic protein X relating to the albumin fusion protein of the invention. The sequence listing data for this specification was dowloaded from the USPTO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and

                                                                                                                                                                                                                                                                                     The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumour endothelial marker (TEM) protein selected from ABB90730, ABB90740, ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antiangiogenic activity. They are useful for inhibiting tumour provent, neosangiogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL93096-ABL93041 and ABL92143-ABL93191; normal and other of the control of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        An isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumor endothelial marker (TEM) protein, useful for inhibiting tumor growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  St Croix B,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               02-AUG-2000; 2000US-0222599P

                                       The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumour endothelial marker (TEM) protein selected from ABB90730, ABB90740, ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antiangiogenic activity. They are useful for inhibiting tumour growth, neoangiogenic activity bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL91996-ABL92041 and ABL92143-ABL92191; normal endothelial markers (NEM) ABL92042-ABL92074; and pan-endothelial markers (NEM) ABL92042-ABL92074; and pan-endothelial markers
                                                                                                                                                                                                                                                                                    An isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumor endothelial marker (TEM) protein, useful for inhibiting tumor growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antiangiogenic; tumour; neoangiogenesis; vascularised tumour; polycystic kidney disease; diabetes; retinopathy; rheumatoid arthritis; psoriasis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC anthrax toxin receptor (ATR), previously designated TEM8, and identified CC following a database screening using a newly isolated human surface-bound CC ATR (see ABP54903). The present sequence differs from the newly isolated CC human ATR only in the cytoplasmic domain (221 rather than 25 amino acids CC long), suggesting differential splicing of a primary mRNA transcript. CC Anthrax toxin protective antigen (PA) binds to these ATRs at a von CC willebrand factor A domain located in the extracellular domain of ATR. CC The invention provides ATR polypeptides and polynucleotides, vectors, CC methods for identifying molecules that bind the ATR and which reduce the textity of anthrax toxin. A claimed method for treating anthrax in a CC human or animal involves administering an agent that inhibits binding CC between PA and ATR at a level effective to reduce the severity of cragment of it, a pa-binding polypeptide at least 80% identical to these, CC a fusion protein, a monoclonal or polyclonal antibody, a polysaccharide, CC a lipid or a nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a novel method for the isolation of endothelial cells (ECS), and the identification of genes expressed in normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are all useful for inhibiting meoangiogenesis or tumour angiogenesis, for inducing an immune response to tumour endothelial cells in a patient for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New purified human transmembrane protein, designated as tumor endothelial marker (TEM) 3, useful for detecting, diagnosing or treating tumors, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a novel method for the isolation of endothelial cells (ECs), and the identification of genes expressed in normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are also useful for inhibiting neoanglogenesis or tumour anglogenesis, for inducing an immune response to tumour endothelial cells in a patient, or for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention
                Human heat mitochondrial protein as

Accordingly, these compositions have neuroprotective, nottropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mitochondrial; human; screening assay; diabetes mellitus; Huntington's disease; osteoarthritis; Leber's hereditary optic neuropathy; LHON; mitochondrial encephalopathy lactic acidosis and stroke; MELAS;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                   The present invention describes a method for detecting a pancreatic CC cancer-associated transcript in a biological sample. The method comprises CC contacting the biological sample with a polynucleotide that selectively CC hybridises to a sequence at least 80% identical to a sequence as shown in CC any one of Tables 3 to 25 in the specification or having the GenBank CC cancer in a human or animal subject being tested, determining the CC likelihood that a subject having a pancreatic cancer will survive, or CC determining the suitability of a subject having a pancreatic cancer will survive, or CC surgical resection therapy; (2) detecting a pancreatic cancer for CC surgical resection therapy; (2) detecting a pancreatic cancer associated CC subject having a pancreatic cancer will survive; and (4) monitoring the CC efficacy of a therapeutic treatment of pancreatic cancer. A pancreatic cancer associated transcript has cytostatic activity, and can be used in CC gene and protein therapy. A pancreatic cancer cancer. A pancreatic concer-associated polypeptide or an antibody that binds to the isolated polypeptide can be used for diagnostic methods are useful for the polymcleotide, a vector comprising the polymcleotide, an isolated concer or its metastases, and for monitoring the progress of disease such as during remission or following surgery or chemotherapy. The present CC cancer remission or following surgery or chemotherapy. The present CC sequence represents human tumour endothelial marker 8 precursor (TEM8), which is used in the exemplification of the present invention.

The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 Ig mutated fusion protein of the invention.

CC AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. CC AAE01514-AAE01544 represent human secreted protein fragments or variants. CC The genes and their secreted proteins are useful for preventing, treating cor ameliorating medical conditions, e.g., by protein or gene therapy. CC Pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the 28 genes, the new genes. Specific uses are described for each of the 28 genes, CC based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, autoimmune cdisorders, cancer, tumours, foetal and developmental abnormalities, autoimmune disorders, cancer, tumours, foetal and developmental abnormalities, cognitive disorders, ecf., Alzheimer's disease, Parkinson's disease), CC cognitive disorders, schizophrenia, asthma, skin disorders (e.g., Parkinson's disease), CC angiogenic disorders, kidney disorders, gastrointestinal disorders, gregnancy-related disorders, endocrine disorders, and infections. The CC proteins can also be used to aid wound healing and epithelial cell cc proteins can also be used to aid wound healing and epithelial cell cc proteins can also be used to aid wound healing and epithelial cell cc proteins can also be used to aid wound healing and epithelial cell cc proteins can also be used to aid wound healing and epithelial cell cc proteins can also be used to aid wound healing and epithelial cell cc proteins can also be used to aid wound healing and epithelial cell cc protein of the invention can be used in alleviating symptoms associated corrected of the invention can be used in alleviating symptoms associated corrected to the invention of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                       The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, reproductive disorders (e.g. Alzheimer's, enhizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Albumin fusion protein; therapeutic protein; human albumin; lhuman serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; endocrine disorder; haematopoietic disorder; neural disorder; connective disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12-APR-2000; 2000US-0229358P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB seq length: 0

                                                                                                                                                                                                               FUNCTION: Cellular role is not yet known.

SUBUNIT: Binds to the protective antigen (PA) of Bacillus anthracis in a divalent cation-dependent manner, with the following preference: calcium > manganese > magnesium > zinc.

Seems to bind to collagen type IV and laminin.

SUBCELULAR LOCATION: Type I membrane protein (isoforms 1 and 2).

Secreted (isoform 3). Isoform 1 is expressed at the cell surface while isoform 2 is predominantly expressed within the endoplasmic
                                                                                                                                                                        reticulum and not at the plasma membrane. ALTERNATIVE PRODUCTS:

FUNCTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and VCAM1. May play a role in the atherosclerotic process such as clearing lipoproteins from plaques and in phagocytosis of bloodborne pathogens, particulate matter, and senescent erythrocytes from the blood (By similarity).

SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-D associates with beta-2 (By similarity).

SUBCELIULAR LOCATION: Type I membrane protein (By similarity).

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrin with I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61

J. Immunol. 163:1984-1990((1999)).

-i-FUNCTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and VCAM1. May play a role in the atherosclerotic process such as clearing lipoproteins from plaques and in phagocyrosis of bloodborne pathogens, particulate matter, and senescent erythrocytes from the blood.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE-99059842; PubMed=9841932;

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integring with I-domains do not undergo protease cleavage. SIMILARITY: Belongs to the integrin alpha chain family. SIMILARITY: Contains 7 FG-GAP repeats. SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         European

"Cloning and characterization of integrin alpha subunits from the resolitary ascidian, Halocynthia roretzi.";

If J. Immunol. 166:1710-1715(2001).

C. -!- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

C. -!- SIMILARITY: Belongs to the integrin alpha chain family.
